

OPINION ABOUT FISH IN WATER

María Luisa Álvarez Blanco
General Director of FEDEPESCA

FEDEPESCA

OPINION ABOUT FISH IN WATER

- Regulation establishes the temperature of storage (under ice, or ice melting temperature, 0-2 °C)
- Can this storage system meet the microbiological criteria established in European Regulation?
- Authorized chilled water systems can ensure the correct Temperature (0-2°C), but fishery products stored in water may exceed the allowed Temperature.
- May be the water has additives.?

OPINION ABOUT FISH IN WATER

- Melting water can not be drained (as established in the Regulation).
- Fishery products stored in water can may foster fraud (Additives can be added to water).
- Fishery products can gain weight. We pay for water instead of fish.
- Once in the counter, fish without water loses weight and deteriorates quickly .
